Monitor

Network Card

Modem

Computer Part Functions

Directions: Explain the job of each of the computer parts listed below.

- **Monitor:** Device that gives a display
- **Computer Case:** “The shell” that protects the inside components of a computer from any damage. This is what you see on the outside of any desktop computer.
- **Mouse:** Device that allows you to move a cursor around and do stuff.
- **Keyboard:** Device that allows you to type things.
- **Case Fan:** The main fan inside a desktop computer, cools down the components inside the computer.
- **CPU Fan:** Cools down the CPU, since it can get hot.
- **CPU:** “The brain” of the computer, allows tasks to be completed when using the computer.
- **CD/DVD Drive:** Device that reads DVDs/CDs.

- **Hard Drive:** Device that contains all files on the computer, without it you can't use any operating system.
- **RAM:** Device that stores temporary files, helping to make your computer load things faster. The higher the storage space, the more files it can contain which affects the speed of the computer.
- **Sound Card:** Allows other audio devices to be used on the computer, including headphones or a microphone.
- **Video/Graphics Card:** Device that affects the output of what you see on the monitor.
- **Modem:** Device that allows you to attach a phone line to the computer.
- **Network Card:** Device that allows the computer to be connected to the internet, without this device your computer cannot have internet.
