

## Computer Software Notes

- **Software** – Programs that operate your computer or perform a function
- The three types of software are:
  - System Software/Operating System (OS)
  - Application Software
  - Programming Languages
- **System Software/Operating System (OS)** – Coordinates different hardware components, the environment of the computer
  - Examples: Windows 10 and macOS
- **Application Software** – Computer program designed to perform a group of coordinated functions, tasks, or activities
  - Example: Microsoft Word
- **Programming Languages** – A vocabulary and set of grammatical rules for instructing a computer to perform specific tasks
  - Example: Java, Python, C++
