Amazon Should Not Keep Expanding

Amazon is becoming too big. It is shutting down actual businesses, since it is drawing more and more people everyday to do all their shopping on their site. If the company goes to become too big it will be forced to split up, as apart of the Antitrust laws. Because of this, Amazon should not keep expanding. Amazon should not keep expanding, the company is becoming big quickly, shutting down other businesses, and if it keeps expanding it can be split up by the rules of the Antitrust laws.

Over the last few years the company has been growing very quickly, maybe even a little too quickly. The company draws in more and more new customers every day. The problem with Amazon growing like this is that actual stores, like Toys R Us and Kmart, are being shut down because they lose their customers, who go to Amazon instead of them.

If Amazon were to become too big, then the rules of the Antitrust laws can split the company up. The Antitrust laws are set in place to prevent a company becoming a monopoly, meaning it owns everything in the field that their company is apart of. An example of a Monopoly that got split up is the Bell Phone Company. What this means is if a company must be split up, then the one big company will be split up into several different small companies. Verizon, or Bell Atlantic, was one of the small companies created after Bell got split up.

Amazon is becoming bigger every day. It currently dominates the online shopping industry. But it is shutting down many stores, since it is drawing their customers over to their site. If the company expands too much, then it will have to be split up by the Antitrust laws.
