

Unit 4 Lab

Project Link: unit4lab.bradykondek.ga

1. **Const** - creates a read-only reference to a value. At first, I really wasn't sure what it meant at all, but eventually I realized that it is pretty much the same thing as saying *var x = 10*.
2. **cube.rotation.x and cube.rotation.y** – Change the x and y values of the shape which gives it the movement you see. Without these lines of code, the shape would not move as it does. This doesn't confuse me, I just put it because nothing else in the project confuses me that much.
3. A CDN (Content Delivery Network) is a geographically distributed group of servers that work together to provide fast delivery of Internet content. For web developers who don't want to store everything on their local site, they can use a CDN to offload things like pictures and other files to the CDN and link it to their site.
